

## Borregos Stadium presented with a 2020 Design Award

The Texas Society of Architects has recognized the design of this Tec de Monterrey project with an award.

24/05/2020

The architecture of the **Borregos Stadium** on the Monterrey campus, the design of which is configured to interact with its surroundings, has been presented with a [\*\*2020 Design Award\*\*](#) from the [\*\*Texas Society of Architects\*\*](#).

The Society recognized **19 outstanding projects** by architects or offices from this U.S. state, which will be published in the September/October issue of the Society's magazine.

[\*\*Beck\*\*](#), whose headquarters are in **Dallas, Texas**, was the company in charge of the design and construction of the stadium.

The architects who designed the stadium, **Rick del Monte and Tobias Newham**, were inspired by what the institution **seeks to transmit with initiatives such as**

**DistritoTec:** that spaces should be open to the community with a minimalist design.

*"We're really very proud of this international recognition for the design and architecture of the Borregos Stadium in Monterrey,"* said Víctor Gutiérrez Aladro, Rector of Operations at the Tec.

*"We're very grateful to the Texas Society of Architects for this recognition that reaffirms the quality of design, architecture, functionality, and beauty of this iconic space in our city,"* he added.

#### Estadio Borregos

Borregos Stadium was the only space outside the United States recognized by the Texas Society of Architects.

The design highlights **the institution's openness to society**, preserving the historical architecture of its buildings and **connecting with the community**, said this director.

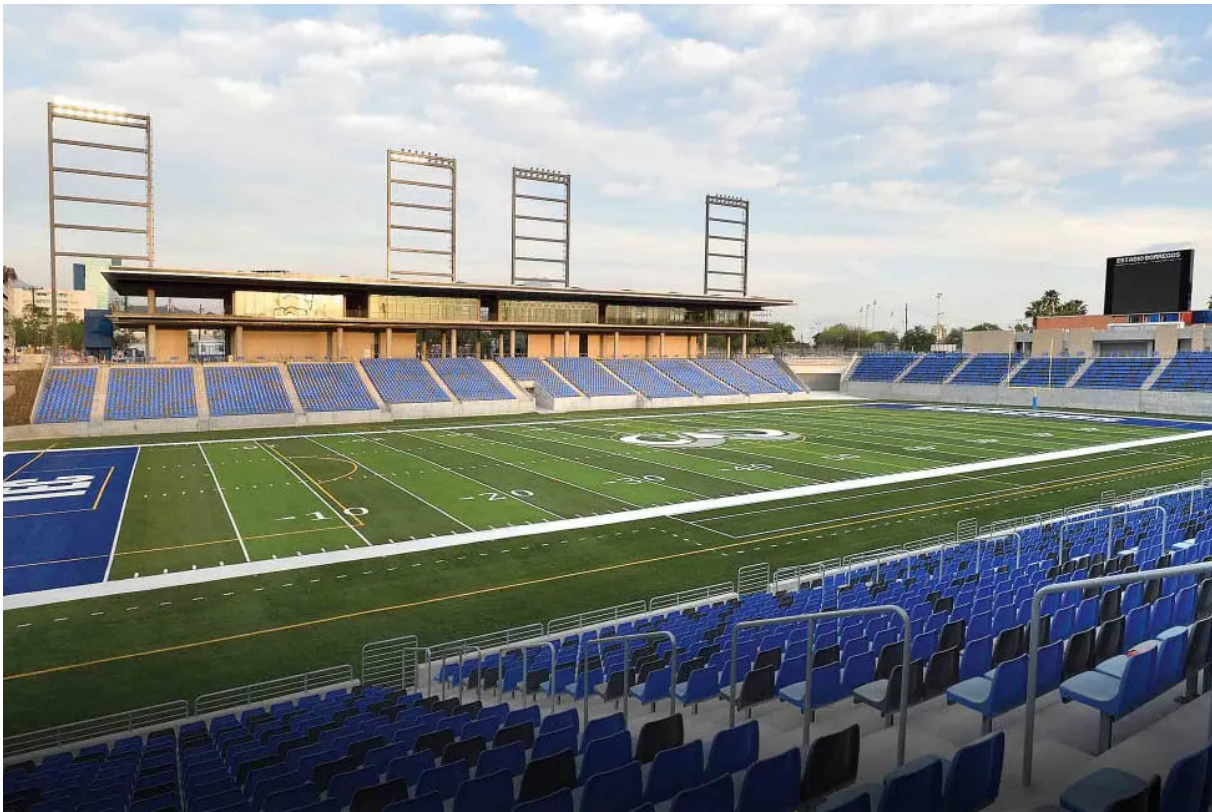

The stadium adapts to the needs of the Monterrey campus and has been built to **international standards**, said Mario Adrián Flores, Vice President of the **Tec's Northern Region**.

*"**The Borregos were always at the heart** of its design and construction. It reflects those who built it, supervised it, and the students and coaches who use it and bring it to life,"* he said.

Its view of the **Cerro de la Silla** and the view of the stadium from Fernando García Roel Avenue are other highlights of the stadium's design.

Construction of the stadium took **two and a half years** and consisted of four phases. It was inaugurated on April 30, 2019.

With an **investment of 30 million dollars** it was built in what is called a **complete life cycle**, i.e. design, construction and operation of the buildings have to be efficient.

The open design of the Borregos Stadium strengthens its connection with its community.

*"We're very proud to see **Tec values, such as collaboration, reflected** in our work,"* said José Luis Graue, Director of Construction in the Tec's Northern Region

*"This recognition represents the Tec's vision and its **commitment to health** and to **sport** for the students obviously, but also for its commitment to existing in harmony with its neighbors and the surrounding environment,"* he added.

An important point to notice is how the stadium has been designed to be open to the community, said **José Antonio Torre**, Director of Urban Planning and Sustainability and head of **DistritoTec**.

*"It's always very satisfying to receive recognition for work that has so much meaning for the Tec and for DistritoTec. It's a truly urban university stadium, which offers services to the university and the area in which it is located,"* he said.

For Beck, being part of the construction of the **Borregos Stadium** was a **watershed for the company**.

*“As Beck’s first integrated project in Mexico, its construction is an example of the success of our integrated system. **We’re grateful to Tec de Monterrey** for placing their trust in new models and sharing our vision,”* said the company in a press release.

The **Borregos Stadium** is home to Monterrey’s men’s and women’s **American football and soccer** teams and various student events have been held there, both for **Art and Culture** and **Leadership and Experience**.

The stadium was inaugurated on **April 30, 2019**.
